

Thursday 2nd July 2009

Free of charge
(refreshments included)

Agenda

08:45 - Registration

09:00 - The VMM & vSphere

10:00 - VMware

VMware will demonstrate solutions for automated site recovery using VMware Site Recovery Manager.

10.45 - Coffee Break

11:00 - Riverbed

Riverbed will demonstrate their Wide Area Data Services solutions, which accelerate WAN traffic and can reduce backup and replication times for remote sites by 75% or greater.

12:00 - Q & A followed by Lunch

Venue

VMware UK Limited
Theta Building
Lyon Way, Frimley
CAMBERLEY
GU16 7ER

[Click here for directions.](#)

Free Shuttle from Farnborough Main Train Station upon request.

Your Virtualised DR Strategy

Foundation IT invites you to attend our Technology Briefing on the "Virtualisation Maturity Model", VMware's latest product release vSphere and automated multisite recovery with VMware and Riverbed.

Our CEO, Mr Simon Walker would like to share his vision for how virtualisation is going to affect your IT strategy. The Virtualisation Maturity Model is Simon's own view on where virtualisation is heading and how this can benefit you and your organisation.

VMware Site Recovery Manager and Accelerated Replication

The virtual infrastructure enabled by VMware now automates disaster recovery planning and execution by natively integrating the storage platform into VMware's Site Recovery Manager software.

Accelerate your WAN with Wide-Area Data Services from Riverbed

Regular backup and replication of remote offices and data centres are now must-have solutions for organisations of all sizes. But how do you make WAN-based backup fast, reliable and cost-effective?

As the leader in Wide-area Data Services (WDS) solutions, Riverbed helps companies worldwide cut backup time over the WAN by 75% to 98% and replicate data exponentially faster. So now companies everywhere can reduce backup windows, improve backup consistency, and implement their DR solutions - ensuring they are prepared for any contingency.

Whether you are considering ways to optimise your current backup and data replication strategy, or looking for a more effective strategy, Riverbed is a critical part of your backup and disaster recovery solution. Be better prepared.
