Virtualisation and Cloud

Foundation IT invites you to attend our Technology Briefing on "Your Virtualisation Strategy and Cloud computing."

Virtualisation Strategy - A Maturity Model

Our CEO, Mr Simon Walker would like to share his vision for how virtualisation is going to affect your IT strategy. The Virtualisation Maturity Model is Simon's own view on where virtualisation is heading and how this can benefit you and your organisation.

Cloud computing - VMware's view

VMware are the world leader in Business Infrastructure Virtualisation. VMware vCloud delivers a single way to run, manage, and secure your applications where you want them, when you want them. Through VMware's leading cloud service providers, you can get VMware Virtualised services ranging from on-demand, pay-as-you go infrastructure, to enterprise-class, production ready offerings.

Cloud computing - Dell's view

Known as Cloud or Hyperscale, this evolving architectural strategy takes many forms but has one fundamental attribute: resiliency and availability stemming from software that often spans over thousands of hardware nodes. No longer reliant on the availability of individual server or storage devices, the massively scaled-out architecture of the Cloud requires a new way of thinking about system and datacenter design.

Cloud computing has the potential to transform the way IT resources are utilised, with many IT departments looking for ways of delivering cloud services in a secure, compliant and considered manner. Please come along and listen the views of leading organisations and thinkers on this most important topic.
