

Stratus Master Reseller

Foundation IT continue to maintain our commitment to Stratus with the continued award of Stratus Master Reseller. One of only two companies in the United Kingdom to obtain this status it demonstrates our ongoing commitment to this amazing technology that delivers levels of availability hitherto unobtainable in the Microsoft marketplace without adding any complexity to the management of the systems.

Stratus Technologies (www.stratus.com)

Stratus server solutions eliminate the complexities of cluster deployment and its ongoing maintenance headaches. Because Stratus Continuous Processing features are engineered into the system, there is no need for failover scripting, repeated testing procedures, or any work required to make applications "cluster-aware." Instead, Stratus servers automatically provide zero failover time and critical data protection for both memory and disk. As a result, your IT staff are free to devote their time to other projects that are critical to their business's success.

Stratus Technologies is a global solutions provider focused exclusively on helping its customers achieve and sustain the availability of information systems that support their critical business processes. Based upon its 25 years of expertise in server and services technology for continuous availability, Stratus is a trusted solutions provider to customers in manufacturing, life sciences, telecommunications, financial services, public safety, transportation & logistics, and many other industries.

Foundation IT (www.foundation-it.com)

Foundation IT specialise in providing availability solutions to our successful clients and Stratus is a key component of our solution set enabling us to deliver high availability to applications that are otherwise difficult or impossible to cluster from a management perspective. Specific line of business applications, in house developed solutions and major Microsoft subsystems such as Exchange or SQL all benefit from 99.999% levels of availability with no increase in management complexity and integrated "phone home" technology to pro-actively respond to issues.
