

## **Vizioncore Gold Partner**

Foundation IT have gained the Vizioncore Gold Partner status having worked with this technology in a number of clients to enhance solutions delivered based upon the VMware Infrastructure 3 architecture. Vizioncore deliver solutions that optimise and improve the capability of VMWare to deliver performance management, backup and replication solutions.

### **Vizioncore ([www.vizioncore.com](http://www.vizioncore.com))**

Vizioncore leads the way in helping virtualization customers solve "real world" problems with intelligent software. In 2004, Vizioncore released esxRanger, which has quickly become the standard for hot image backup, change control, archival and DR for VMware Infrastructure. Today, vRanger Pro is used by companies worldwide for robust backup and recovery strategies. vRanger Pro offers the industry-standard solution to perform reliable, repeatable, automated hot backups of running virtual machines, as well as file-level recovery. vRanger Pro is the only backup solution built for virtualized environments with no legacy issues or encumbrances of solutions originally developed for physical architectures. vRanger Pro has become the most recognized and widest used backup solution for the VMware platform today.

Leveraging the success of its proven, flagship technology, Vizioncore has added new products to form a complete suite of applications to enhance VMware Infrastructure 3, including vCharter, vMigrator and vReplicator.

### **Foundation IT ([www.foundation-it.com](http://www.foundation-it.com))**

Foundation IT have been utilising Vizioncore technology as part of an overall virtualisation strategy for over 2 years. The Vizioncore technology leverages VMWare to deliver highly integrated backup solutions which are particularly suited to offsite backup for DR / Business Continuity. Vizioncore has grown from strength to strength and Foundation IT have recognised the importance of their technologies by committing to Gold Partner status.
