10 ways to reduce you Azure bill

1	Move to reserved instances and prepay for resources for a discount
2	Switch resources off when they are not being used
3	Right-size machines / resources
4	Understand your spending by using billing portal, power BI or 3rd party tools
5	Use Auto-scaling to reduce costs during off peak hours
6	Make use of Azure PaaS services as an alternative to deploying VM's on IaaS
7	Use cold data storage (for infrequently accessed data)
8	Make use of SQL elastic pools
9	Delete unused managed and classic disks
10	Fine tune application and database performance
